HISTORY

Thanks to the insight of the founder **Igino Villa**, Sferova was established in **1973** in a workshop in Bernareggio (MB), initially to machine stainless steel parts. Igino, a designer and metallurgist, soon developed the first series of ball valves for an important Milanese chemical firm. This led to a passion and vision for the product, which together with great willingness and professionalism, enabled **Sferova** to grow and become known as a manufacturer of high-quality ball valves. The year **1983** marked the first stage of major growth, occupying a new industrial area of 800 square meters in Ronco Briantino (MB) with the first CNC tools for machining being installed. The range of valves designed and constructed expanded; valves of increasingly larger sizes and heavy-duty valves for very high pressures were engineered and delivered, and the number of employees continued to increase. Over the next few years, Sferova began a substantial international marketing campaign, appointing exclusive agents in the most strategic areas. As a result, the company was added to the vendor lists of some of the most important companies in the oil and gas sector. In **2008**, Sferova transferred its headquarters to a new, modern industrial complex in Sulbiate (MB), which was specifically designed for manufacturing activities. The area is approximately 11,000 square meters. Staff numbers continued to grow over the next few years and new graduates were employed in the various offices, reaching the figure of 50 employees. In **2012** Sferova was selected to become part of

the largest and most important technology park in Kazakhstan, in Aksai (AIP), after satisfying the Kazakh government's request for a local production site. **Sferova Kazakhstan** was therefore founded, and in a short time became a leader in the production of high-tech ball valves, featured on the vendor lists of Kazakhstan's most important oil companies. The area for valve production is 1,700 square meters. In **2014**, Sferova made another important investment by creating the **Sferova Changshu Valve Company**, a fully owned branch production plant in China, for the purpose of producing extremely high-quality ball valves at reduced costs. Valve engineering, management and quality procedures are entirely Italian. The most important professional roles are also covered by Italian staff, which has allowed Sferova Changshu to enter the global market with very high-quality valves at extremely competitive prices. The area devoted to production is 5,000 square meters, while the offices occupy an additional 400 square meters. In **2018** Sferova expanded its activities overseas, establishing a new commercial office in Houston, Texas, and created **Sferova USA LLC**. The aim is to penetrate the markets of the US, Canada and South America, and strengthen and expand relationships with the most important local oil and gas companies. Our passion for providing solutions to the oil and gas industry continues, as we invest in the future and serve our customers' requirements worldwide.

COMPANY PROFILE

Sferova srl is an Italian company and leader in the production of ball valves, whose aim is to supply products of the highest level of quality and reliability to the energy sector. Since 1973, Sferova has been designing and manufacturing valves with the help of teams of engineers committed to finding solutions to project requirements by concentrating on areas such as structural analysis, fatigue analysis, risk analysis and engineering of materials that contribute to guaranteeing the reliability of the valves. Sferova has strategically diversified its areas of production with the aim of serving international customers according to geographic area and product type. Thanks to its pioneering construction and manufacturing technologies, and consolidated know-how, the company is able to produce highly technological valves for heavy-duty and arduous applications around the world. This drive for innovation involves new technologies, new materials, new shapes and new markets; product performance is accompanied by the quest for a unique style that unites passion and professionalism.

Sferova S.r.l.

Sferova Headquarters and main production plant is located approx. 30 km North-East of Milan and covers a total area of 22.000 square meters.

Sferova (Changshu) Valve Co., Ltd.

Sferova established a new production facility in China (Changshu), 100% Italian owned, with the opportunity to supply valves with very competitive prices and with the advantage of Italian design and quality system /procedures.

Sferova Kazakhstan LLP

Sferova was selected to take part in the Aksai Industrial Park (AIP) Sferova Kazakhstan can manage assembling, testing, painting and after sales activities.

Sferova USA LLC

Sferova set up a representative and commercial office in Houston (Texas) in order to start close relationships with major US EPC's and End Users.

▶ MAIN DESIGN FEATURE

- ✓ General design in accordance with **ASME B16.34, ISO17292, API 6D**
- ✓ Flanged ends in accordance with **ASME B 16.5**
- ✓ Butt welding ends in accordance with **ASME B 16.25**
- ✓ Socket weld ends in accordance with **ASME B 16.11**
- ✓ Threaded ends NPT-F in accordance with **ASME B 1.20.1** or BSPP to **UNI 338**
- ✓ Face to face in accordance with **API 6D** and **ASME B16.10**
- ✓ Fire Safe in accordance with BS 6755 part II, API 6FA and API 607
- ✓ Bi-directional flow tight
- ✓ Antistatic device and anti-blow-out stem
- ✓ Locking Device (on request)

MAIN DESIGN FEATURE

- ✓ General design in accordance with **ASME B16.34, ISO17292, API 6D**
- ✓ Flanged ends in accordance with **ASME B 16.5**
- ✓ Butt welding ends in accordance with **ASME B 16.25**
- ✓ Socket weld ends in accordance with **ASME B 16.11**
- ✓ Threaded ends NPT-F in accordance with **ASME B 1.20.1** or BSP to **UNI 338**
- ✓ Face to face in accordance with **API 6D** and **ASME B16.10**
- ✓ Fire Safe in accordance with BS 6755 part II, API 6FA and API 607
- ✓ Bi-directional flow tight
- ✓ Antistatic device and anti-blow-out stem
- ✓ Self-aligning floating seat rings with pre-load springs
- ✓ Double Block and Bleed
- ✓ Drain and Vent connections
- ✓ Automatic body cavity relief system
- ✓ Stem and seats injections facility (on request)
- ✓ Locking Device (on request)
- ✓ Lifting lugs (where applicable)
- ✓ Support feet (where applicable)

PISTON EFFECTS SINGLE VS DOV BLE

Thanks to the pressure increase, the gap $C = A - B$ produces a single piston effect that pushes the seat to the ball.

The gap $A = B - C$ produces a piston effect that pushes the seat to the ball.

IGI-T

Trunnion mounted ball valves, construction to ASME B16.34-API6D, 2/3 piece bolted body, split body, side entry, double block & bleed, flanged RF/RTJ to ANSI B16.5, face to face to ANSI B16.10, full/reduced bore, ISO (5211) top work standardization for actuation, metal seated (ball & seats with Tungsten – Chromium Carbides coating), seat leakage rate to ISO 5208 RATE C, fire safe design, antistatic & blow out proof stem, self-relieving seats, vent & drain.

TM2-CRY/TM3-CRY

Sferova cryogenic ball valve series are designed according to the main international standard and to perform in the most demanding applications down to -196°C. Validation protocol of each design includes testing @ minimum service temperature, which can be performed in house. Dedicated R&D activities are in progress on a rolling basis to continuously develop the product and each specific component.

**OTHER
KIND OF
VALVES**

TEV

Trunnion mounted ball valves, construction to ASME B16.34-API6D, top entry body, double block & bleed, flanged RF/RTJ to ANSI B16.5 or BW ends to ASME B16.25, face to face to our std., full/reduced bore, ISO (5211) top work standardization for actuation, seat leakage rate to ISO 5208 Rate A, fire safe certified to BS 6755 Part II-API 607-API6FA, antistatic & blow out proof stem, self relieving seats, vent & drain.

DBB

Floating & Trunnion mounted ball valves, double block and bleed modular design, construction to ASME B16.34 – ASME VIII Div.II, flanged, welded or clamp type ends, full/reduced bore, ISO (5211) top work standardization for actuation, seat leakage rate to ISO 5208 Rate A, fire safe certified to BS 6755 Part II-API 607-API6FA, antistatic & blow out proof stem.

TQT/TQT-INT

floating ball valves, construction to ISO 17292, one piece threaded body joint, end entry, with screwed GAS ends to BSPP-UNI 338 – with screwed NPT F ends to ASME B1.20.1 - SW ends to ASME B16.11 or '-INT' version complete with no. 2 long integral nipples (L=100mm/each) PE or BW to ASME B16.25, full bore, face to face to our std., ISO (5211) top work standardization for actuation, seat leakage rate to ISO 5208 Rate A, antistatic & blow out proof stem.

**TM3/FW****Fully welded ball valves for underground service**

Floating or trunnion mounted ball valves, construction to ASME B16.34 – ASME VIII Div. II – API 6D, fully welded body, flanged RF/RTJ to ANSI B16.5 or BW ends to ASME B16.25, face to face to ANSI B16.10, full/reduced bore, ISO (5211) top work standardization for actuation, seat leakage rate to ISO 5208 Rate A, fire safe certified to BS 6755 Part II-API 607-API6FA, antistatic & blow out proof stem.

SUBSEA

Sferova subsea ball valve series are designed in full accordance with API Spec.6DSS latest edition. Sferova can also provide the product with API 6DSS monogram and qualified according to validation type test, including hyperbaric test, which can be performed in house. Subsea valves can be supplied in a wide range of materials and configurations to satisfy Customer's requirements and applications and can be manually operated (by ROV or by diver) or actuated.

**TB****Bottom outlet ball valves TBP or TBS model**

Bottom outlet Floating ball valves, one-piece body with screwed insert, upper flange oversized, lower flange STD, face to face to our std., full bore, seat leakage rate to EN12266-1 Rate A, design with perpendicular stem or slanting stem.

AUTOMATED VALVES

All our ball valves can be fitted with every kind of actuators & brands. We can follow customer's requirements in terms of actuators selection & accessories. Complete system (valve + actuator) can be tested and certified according to project's requirements.

▶ ALL OUR BALL VALVES CAN BE FITTED WITH

- ✓ Single acting pneumatic actuator
- ✓ Double acting pneumatic actuator
- ✓ Spring return system (dead man)
- ✓ Motor operated system
- ✓ Gas over oil actuator
- ✓ Line break system
- ✓ Positioner
- ✓ Manual Override
- ✓ Fire proof actuator system
- ✓ Digital partial stroking
- ✓ Box + Limit switches
- ✓ Solenoid valves
- ✓ Air filters
- ✓ Control panels

MATERIALS

SOFT MATERIALS DATA

Specific and focused care is dedicated to seals and soft materials selection to better fit service conditions and valve performance required. Sferova strong knowledge is empowered through constant R&D activities and partnership with selected qualified suppliers. The analysis includes full compliance with customers requirements in terms of Suppliers and products qualification and certification level, which could in some cases achieve EN10204 type 3.2. Different configurations, different design, different materials are included in such technical and quality management practice.

TEST

TESTING CAPABILITY

Sferova is able to meet the most challenging requirements of special qualification or production tests, both in accordance with the most relevant international standards and customer specifications. Sferova suitable equipment and technical and qualified personnel allow to complete test management and execution in-house, completely in safe way. Monitoring, control and recording are available during test execution and after.

In detail, Sferova is able to manage and perform tests with pressure, temperature and mechanical cycles, combined or performed individually, as listed below:

- ✓ Functional test;
- ✓ Torque test;
- ✓ Antistatic test;
- ✓ High pressure gas test with N₂;
- ✓ Fugitive emission test with Helium (both qualification and production);
- ✓ Low temperature test;
- ✓ High temperature test;
- ✓ Cryogenic test;
- ✓ Flushing test;
- ✓ API Spec.6A PSL4;
- ✓ API Spec.6A PR2;
- ✓ API Spec.6A PR2F.

Multiple Stations Test Bench (Hydrostatic and Gas Test)

Actuator Flushing / NAS Cleaning

FET Prototype Test acc. to ISO 15158-1

Torque and Functional Test

API 6A PR2F Test

Valve & Actuator Factory Acceptance Test acc. to Client specification

Cryogenic Test

FUGITIVE EMISSIONS

- ✓ High experience in Fugitive Emission management of testing, both on qualification for type testing according to ISO15848-1 and on production acceptance testing according to ISO15848-2.
- ✓ Sferova has managed and performed in-house several Fugitive Emission Qualification Tests witnessed by Third Party Agency.
- ✓ 27 valve design qualified according to ISO15848-1, with different sealing system configuration:
 - ✓ O-ring sealing;
 - ✓ Lip seals;
 - ✓ Graphite sealing;
 - ✓ V-Pack sealing.
- ✓ Valve Pressure Classes Qualified:
 - ✓ From ANSI 150 to ANSI 2500;
 - ✓ Valve Stem Diameter Qualified:
 - ✓ From 5,98mm to 76,5mm for Floating Ball Valves;
 - ✓ From 10mm to 150mm for Trunnion Mounted Ball Valves.
- ✓ Temperature Classes Qualified:
 - ✓ From -46°C to +400°C with full graphite sealing;
 - ✓ From -46°C to +200°C with lip seals;
 - ✓ From -29°C to +200°C with O-rings.
- ✓ Endurance Classes Qualified:
 - ✓ C01
 - ✓ C02
- ✓ Tightness Classes Qualified:
 - ✓ AH with FKM O-rings sealing;
 - ✓ BH with O-rings, Lip seals and graphite sealings.
- ✓ Management and execution in-house of Fugitive Emission on production valves: according to ISO15848-2 at higher pressures than ISO15848-2, based on customer request.

QUALITY CONTROL

Sferova Quality Control verify and assure the conformity of each single components, fully traced and identified from BOM validation to final release. Qualified personnel has the equipment and instruments suitable to perform NDE inspection and special test. 100% of Sferova production is tested and inspected according to API Spec. 6D before final release, as standard, or according to API Spec. 6DSS or API Spec. 6A as applicable. Sferova can manage and perform the most required NDE examinations according to procedure issued in compliance with applicable relevant standards. NDE capability is listed below.

- ✓ Ultrasonic test
- ✓ Magnetic particle control
- ✓ Dye penetrant inspection
- ✓ Roughness test
- ✓ Hardness test
- ✓ Positive material identification
- ✓ Visual control
- ✓ Dimensional control
